

## **AZKAR OBTAINS THE LÓGICA CERTIFICATION**

*26th November of 2010.*- Azkar, the lead logistics provider for the Iberian Peninsula and the Islands, according to its politics of constant improvement, has achieved the LÓGICA certification. This certifies companies that meet the standards established in the Code of Good Practice of LÓGICA.

Azkar takes its commitment to quality and respects the principles of the Code with which it has tried to establish a common policy framework for the sector that offers guarantees to all parties involved in the logistics process as well as common rules for all operators under the same conditions when competing.

As noted by Eloisa Garcia-Moreno Navarro, General Director of LÓGICA: "LÓGICA certification is a business certificate attesting the commitment of those who hold it the practices responsible for the development of their business. It is a distinction of the best companies and an element of value and prestige inside and outside the sector. It is recognition of the excellence of logistics companies that are committed to continuous improvement and active contribution to economic and social development of the sector. The Certification is valid for three years, renewable. After 3 years, a renovation audit is developed, and will last another 3 years."

Also in line with the policy of quality mentioned above, Azkar has renewed this year the Certificate of Quality and the right to use the corresponding AENOR brand, with the number ER-0611/2007, which indicates the Management System accordance with the UNE-EN ISO 9001.

On the other hand, Azkar is conscious that the quality certification AENOR is very important for a company of its size (more than 5,000 professionals, 2,400 vehicles, 71 facilities in Spain and Portugal) and that its commitment with continuous improvement makes it to assume the quality responsibility in administrative and logistic management for the international transportation of general goods by air and sea.
