### **The logistics operator sector grew by 1.5% in 2010**

After a severe slump in 2009, the sector of logistics operators increased 1.5% in 2010 when obtaining an aggregate turnover of 3,475 million euros. The figures belonging to a study by consultancy DBK, show a recovery in business in 2010 compared to the decrease of 8.5% recorded in the previous year. The growth of the sector in 2010 was due to the reactivation of production of some of the industries that are customers of logistics operators, such as automotive, food, textiles and footwear. Also, the trend towards outsourcing the storage of goods and associated operations helped the recovery of the sector of logistics operators.
